Georgia and others

Biographical Summary

Ghanem has a wide-range of international experience, starting his career in designing some of the world's most challenging infrastructure and construction projects, and later in their management. He has a particular expertise in the management of projects as part of sustainable development and has developed tools to address sustainability from a holistic perspective, not only looking at the direct issues, but also considering the wider sphere of stakeholders to create optimal results. Part of this includes looking at wider risk implications, including "non-technical" risks, including political and economic risks, both quantitatively and qualitatively. Ghanem received awards from UK's Institute of Civil Engineers and Royal Academy of Engineering.

Ghanem was a member of the Club of Rome's think-tank 30 (2004-2009) and is an active promoter of inter-faith dialogue. He is regularly quoted in the international media, and has commented on development, economic and political risks and his remarks are regularly published by, for example, the Times of London, Deutsche Welle TV, Reuters, the National Daily in Abu Dhabi, Institutional Investor, Dubai Eye Radio and others.
